

Environmental Sustainability Statement

Bimbadgen acknowledges the responsibility it has toward the environment and maintains a positive and progressive attitude toward environmental sustainability within our workplace. It is important to show our commitment by providing a clear purpose of environmental management within our business.

We strive to work closely with our employees, suppliers, as well as our consumers to identify and continually manage and reduce our environmental impacts and ensure that sustainable principals are integrated into our core business strategy.

As a part of continued commitment to environmental sustainability we understand there are social and economic factors which we must include in our focus as we aim to find a balance in maintaining effective environmental policies at Bimbadgen. The key areas of focus for Bimbadgen and our commitment to the environment include, but are not limited to;

- Minimize waste and pollution through re-use and recycling of resources wherever practical.
- Reduce and conserve our use of electricity and water.
- Reduce our carbon footprint by obtaining resources as locally as possible.
- Work closely with our employees, suppliers, contractors and customers to engage them in our efforts to protect the environment.
- Develop, continually re-assess and update an environmentally sustainable management plan.
- Make business decisions that take these commitments into account.

Through the creation of Bimbadgen's EMP, we commit to improving our environmentally sustainable practises and the involvement of all staff within the business. The EMP will reinforce the current practices and provide the business with the tools needed to correctly implement and monitor new policies and procedures. As a business with a positive and progressive attitude toward environmental sustainable development and practices, Bimbadgen commits to applying the Environmental Management Plan to its daily business activities.
